

CONTENTS

Volume I

Preface	7
Program	9
B. Szökefalvi-Nagy: Alfred Haar (1885-1933): invariant measure of mathematical excellence	17
Z. Ciesielski: Haar orthogonal functions in analysis and probability	25
P. L. Uljanov: Haar series and related questions	57
S. S. Agaian - H. L. Bayadian: Generalized orthogonal Haar systems, synthesis, metric and computing properties . . .	97
M. L. Agranovski: Invariant function spaces and algebras on Lie groups and symmetric domains	115
J. R. Angelos - M. S. Henry - E. H. Kaufman, Jr. - A. Kroö - T. D. Lenker: On the continuity and differentiability of the best approximation operator	127
M. Avdispahič: Concepts of generalized variation on Vilenkin groups and convergence of Vilenkin-Fourier series	145
B. M. Baishanski - S. A. Ali: Strict decrease of the approximation error	165
K. Balázs: On interpolation in the infinite interval	177
G. Baszenski - L. L. Schumaker: Tensor products of abstract smoothing splines	181
G. Björck: Functions of modulus one on $\mathbb{Z}_p$ whose Fourier transforms have constant modulus	193
A. Bogmer - I. Joó - M. Horváth: On the control of strings . .	199
P. B. Borwein: Quadratic and higher order Padé approximants . .	213
W. Braun - H. G. Feichtinger: Banach spaces of distributions with double module structure and twisted convolution . . .	225

C. K. Chui - T. X. He - R. H. Wang: Interpolation by bivariate linear splines	247
B. Csikós: On the absence of non-commutative finite dimensional subalgebra of the Poisson algebra of compact symplectic 2-manifolds	257
H. Dappa - W. Trebels: Pointwise multiplication on anisotropic Bessel potential spaces	263
F.-J. Delvos: Convergence of interpolation by translation	273
W. Dickmeis - R. J. Nessel - E. van Wickeren: A nonlinear quantitative resonance principle with applications to pointwise approximation	289
M. Džrbašjan: Interpolation and spectral expansions associated with differential operators of fractional order	303
D. P. Dryanov: Direct and converse theorems for one-sided approximation by entire functions	323
T. Erdélyi: Pointwise estimates for derivatives of polynomials with restricted zeros	329
S. Fridli - P. Simon: A recent survey on some results in the Vilenkin-Fourier analysis	345
R. Gajewski: Estimate of approximation orders of Tchebycheff-Fourier series	359
H. H. Gonska: Simultaneous approximation by algebraic blending functions	363
R. K. Goodrich - K. E. Gustafson: Spectral estimation and factorization in higher dimensions	383
K. E. Gustafson - R. K. Goodrich: Kolmogorov systems and Haar systems	401
B. Gyires: Contributions to the positive definite solutions of certain differential equations	417
M. S. Henry: Lipschitz and strong unicity constants	423
H. Hudzik - A. Kamińska - J. Musielak: On some Banach algebras given by a modular	445
K. G. Ivanov - A. Sharma: Some new results on Walsh theory of equiconvergence	465

Volume II

I. Kluvánek: Stochastic integrals without probability	479
P. E. Koch: Jackson-type theorems for trigonometric polynomials and splines	485

Lj. M. Kocić - I. B. Lacković: Approximation in discrete cones of p -convexity	495
N. P. Korneicuk: Rearrangements and extremal properties of functions	505
S. Koshi: On some properties of measures on LCA groups	515
M. Krbeć: An integral characterization of zero traces in non-reflexive Sobolev type spaces	525
M. Lénárd: On the two-dimensional spline interpolation of Hermite type	531
T. Lyche: Chebyshev systems and error estimates for best approximation	543
G. W. Mackey: The significance of invariant measures	551
N. G. Makarov: Canonical subspaces of almost unitary operators	611
I. Ž. Milovanović: An inequality concerning algebraic polynomials	623
F. Móricz - I. Szalay: Approximation by mixed arithmetic means of double orthogonal series	629
J. Musielak: On generalized Orlicz sequence spaces of Fourier coefficients for Haar and trigonometric systems	641
A. B. Németh: On Alfred Haar's original proof of his theorem on best approximation	651
Nguyen Xuan Ky: On simultaneous approximation by polynomials with weight	661
B. Opic: Some remarks to a compact imbedding of a weighted Sobolev space defined on an unbounded domain	667
N. Ortnér: Analytic continuation and convolution of hyper-singular higher Hilbert-Riesz kernels	675
T. Ostrogorski: Weighted norm inequalities for Hardy's operator and some similar operators in $\mathbb{R}^n$	687
J. Pál: The almost everywhere differentiability of Wagner's dyadic integral function on $\mathbb{R}^+$	695
W. Pawłucki - W. Pleśniak: Markov's inequality and C^∞ -functions on subanalytic sets	703
J. Peetre: Some unsolved problems	711
F. Peherstorfer: On Tchebycheff polynomials on disjoint intervals	737

J. Prestin: Best approximation in Lipschitz spaces	753
J. B. Prolla - A. O. Chiacchio: Existence of continuous metric selections	761
F. Schipp: Haar and Walsh series and martingales	775
R. Schott: Haar measures and random walks on Lie groups and homogeneous spaces	787
H. Schwinn: On the rate of approximation by strong arithmetic means of orthogonal series	799
A. Seeger: A note on absolute Riesz summability of Fourier integrals	813
P. Sjölin: Regularity properties of spherical means	823
G. Sonnevend: A class of sequential algorithms for spectral approximation with rational and with Haar functions	847
W. Splettstösser - W. Ziegler: The generalized Haar functions, the Haar transform on $\mathbb{R}^+$, and the Haar sampling theorem .	873
R. S. Stanković - M. R. Stojić: A note on the discrete Haar derivative	897
H. Strauss: One-sided L_1 -approximation of continuous func- tions and comparison theorems for monsplines	909
G. J. Székely: Haar measure on semigroups	917
B. Uhrin: Some remarks about the lattice points in difference sets	929
A. K. Varma - P. Vértesi: Lagrange and $(0,M)$ interpolation based on the roots of unity	939
I. Vincze: An extreme value problem on permutations	945
S. K. Vodopjanov: Existence conditions for the extendability of differentiable functions and bounds for the norm of the extension operator	957
W. R. Wade: A growth estimate for Cesàro partial sums of multiple Walsh-Fourier series	975
Xie Ting-fan: On the approximation by Fourier sums	993
D. Zwick: Best n -convex approximation: a sufficient condition .	1003
List of participants	1011
